Amendments to the Specification:

(1) Please amend paragraph [0047] as follows:

[0047] FIGS. 9 and 10 also illustrate the wire guide tab 88 extending radially from the edge of the mounting cup 86. As shown in FIGS. 9 and 10, the wire guide tab 88 may extend from the mounting cup 86 in a direction comprising one or more directional components, wherein a directional component of the one or more directional components is directed generally radially outward from the axis of translation of the mounting cup 86. The wire guide tab 88 helps to shield the wire 106 from any sharp edges at the opening of the mounting cup 86 and/or at the opening of the mounting cup receptacle 94. The wire or wires 106 may also be clipped, or otherwise secured, to the wire guide tab 88. For example, the wire guide tab 88 may be provided with L-shaped brackets at each edge for holding a wire or wires (not shown in FIG. 8) against the wire guide tab 88. Clips, adhesive, or other fasteners, may also be provided for securing the wires to the wire guide tab 88.
